Input Emails (Legitimate, Human-Phishing, AI-Phishing)
Feature Extraction (14 Linguistic Features)
Continuous Features
Categorical / Flag Features
Phishing-Only Subset (Attribution Screening)
Kruskal–Wallis H (all continuous features)
Chi-Square χ^2 Test (3-group)
Mann–Whitney U (AI- vs Human-Phishing)
Chi-Square χ^2 Test (2-group, AI- vs Human-Phishing)
Benjamini–Hochberg FDR Correction (all raw p-values, jointly)
Effect-Size Check
Cohen's d (continuous) Cramér's V (categorical)
adj. $p < 0.05$ AND effect $\geq$ threshold?
No
Discard Feature
Yes
Model 1: Rank-Binned NB (Kruskal–Wallis features)
Model 2: Categorical NB (Chi-Square features)
Attribution Feature Set (Mann–Whitney / 2-group Chi-Square-verified)
Meta-Naive Bayes Probability Combiner
Step 1: $P(\text{Phishing}) \geq 0.50$?
No
Legitimate
Yes
Step 2: $P(\text{AI} \mid \text{Phishing}) \geq 0.50$?
No
Human-Written
Yes
AI-Generated
